General Description page 63

Dependent Resurvey of the South Bdy. (3rd Standard Parallel South), T. 15 S., R. 18 W.

CHAINS

The south boundary (Third Standard Parallel South), was surveyed by J. Gorlinski in 1880, and was resurveyed by A. J. Stewart, Jr., in 1882, who also surveyed the west boundary in 1882. The east boundary was surveyed by T. C. Bailey in 1884. The north boundary and a portion of the subdivision was surveyed by A. J. Stewart, Jr., in 1884. The north boundary was dependently resurveyed by John Dougall in 1915. The east boundary was dependently resurveyed by Vern E. Lane et al., in 1959. The west boundary was dependently resurveyed by Craig P. Sylvester et al., concurrently with this survey.

The following field notes are those of the dependent resurvey of the south boundary (Third Standard Parallel South), and a portion of the subdivisional lines and survey of the remaining portion of the subdivisional lines of Township 15 South, Range 18 West.

Before restoring the corners, the lines of the original survey were retraced, and a diligent search made for any evidence of the original corner or other calls of the original field note record.

The rules of proportionate measurement were applied to ascertain the position of the original corner after exhausting every reasonable possibility of finding direct evidence of the lost corner.

The survey was executed in accordance with the specifications as set forth in the Manual of Instructions, 1947, and the special instructions dated March 21, 1962, and July 10, 1964.

Corners on east-west lines were set on the true latitudinal curve. Lines connecting previously established corners were run by random and true method, but for simplification of the record the random lines are omitted from the field notes.

Measurements were made on the slope with the vertical angle of each interval ascertained by a clinometer in good adjustment; horizontal equivalents alone are entered in the field notes. All lines of this survey were run by direct method where the lines were accessible; lines inaccessible were run by traverse or triangulation methods. Distances to topography on lines run by traverse or triangulation are approximately as scaled from U. S. G. S. topographic sheets. The details of such traverses or triangulations have been thoroughly checked and verified, and in order to simplify the record, the diagrams and reductions are omitted from these field notes.

The direction of the lines of this survey were determined by reference to true meridians established on line by altitude observations on the sun. The lines were carried forward by sustained angulation being supplemented by other numerous altitude observations on the sun taken throughout the progress of the survey.

The geographic position for the southeast corner of the township is at latitude $39^{\circ}27'25.9''$ N. and longitude $113^{\circ}48'44.3''$ W. as adjusted from traverses to U. S. G. S. triangulation station "Hilltop" at latitude $39^{\circ}28'08.65''$ N., and longitude $114^{\circ}02'15.25''$ W., located N. $62^{\circ}44'$ W., 80.20 chs. dist. from the $\frac{1}{4}$ sec. cor. of secs. 31 and 32, Township 15 South, Range 19 West.

The magnetic declination was read at a number of stations throughout the township and the average of these readings was found to be $16^{\circ}30'$ East.

Dependent Resurvey of the South Bdy. (3rd Standard Parallel South), T. 15 S., R. 18 W.

CHAINS

Note: It having been determined that the salt marsh situated in secs. 19, 20, 29, 30, 31 and 32, which was meandered by A. J. Stewart in 1884, is not and has not been a true lake in recent history. It is therefore unsurveyed public land and is so treated in the present survey and resurvey.

Since lot 8, sec. 19; lots 5, 6 and 8, sec. 30; and lots 1 and 2, sec. 32, are patented lands it is necessary to retain and monument the portions of the 1884 meander line that adjoin and form a limiting boundary of said lots. Except for these portions the original meander line of 1884 is completely abandoned.

Dependent Resurvey of the South Bdy.
(3rd Standard Parallel South), T. 15 S., R. 18 W.

Reestablishment of the Survey executed by A. J. Stewart, Jr., in 1882.

Beginning at the standard cor. of Tps. 15 and 15½ S., Rs. 17 and 18 W., monumented with a 2½ in. iron post, set, mkd. and witnessed as described in the official record of the 1959 survey.

S. 88°39' W., along the S. bdy. of sec. 36.

Over rolling desert land.

Asc. 5 ft. over E. slope.

- 1.10 Small spur, slopes NW.; desc. 115 ft. over W. slope.
- 3.40 Small draw, drains NW.; continue descent over W. slope.
- 19.55 Wash, 50 lks. wide, 2 ft. deep, drains SW.; asc. 10 ft. over SE. slope.
- 23.50 Spur, slopes S.; desc. 50 ft. over W. slope.
- 37.13 The N.¼ sec. cor. of sec. 1, T. 16 S., R. 18 W.; described in 1962 field notes of T. 16 S., R. 18 W.
- 37.60 Wash, drains SW.; desc. 20 ft. over W. slope.
- 39.99 The standard ¼ sec. cor. of sec. 36, monumented with a blue limestone, 8x8x10 ins., set, mkd. and witnessed as described in the official record.

At the cor. point

Set an iron post, 30 ins. long, 2½ ins. diam., 4 ins. in the ground to bedrock, and in a mound of stone, 4 ft. base to top, with brass cap mkd.

Township 15 South, Range 18 West

CHAINS

General Description

Township 15 South, Range 18 West, is located in Snake Valley, about 5 miles northeast of Gandy, Utah, and is nearly level desert area, except for the Salt Marsh Range, which is a small range of mountains in sections 10, 15, 16, 21, 22, 28 and the north portion of section 33. Its elevation is 5940 ft. above sea level in the highest portion. The elevation of the rest of the township is around 5,000 ft. above sea level. The area is drained in a south westerly direction by numerous small washes. Salt Marsh is located in portions of sections 19, 20, 29, 30, 31 and 32, and is an alkaline basin that is nearly dry. The soil in the mountains is rocky gravel, becoming sandy clay on the gentle slopes and clay in the lower valley. There is no timber in the township and the vegetation consists of mostly shadscale, scattered greasewood, rabbit brush and salt grass. The north boundary of the township is the Juab-Millard county line. There are numerous unimproved roads throughout the township. The western portion of the township consists of a number of small marshy meadows and water seeps.

CERTIFICATE OF SURVEY

We,
~~XX~~ Craig P. Sylvester and Andrew Nelson, HEREBY CERTIFY upon honor that,
 in pursuance of special instructions bearing date of the 21 day of March, 19 62,
 and supplemental special instructions bearing the date of the 10th day of July, 19
~~XX~~ have made dependent resurvey of the South Boundary (Third Standard Parallel
 South), a portion of the subdivisions and survey of a salt marsh in secs. 19, 20,
 29, 30, 31 and 32 in Township 15 South, Range 18 West.

of the Salt Lake Meridian, in the State of Utah, which
 are represented in the foregoing field notes as having been executed by ~~us~~ and under ~~our~~ direction;
 and that said survey has been made in strict conformity with said special instructions, the Manual
 of Instructions for the Survey of the Public Lands of the United States, and in specific manner
 described in the foregoing field notes.

TOWNSHIP 16 SOUTH, RANGE 18 WEST

CHAINS

The north boundary of Township 16 South, Range 18 West, was surveyed by J. Gorlinski, in 1880, and resurveyed by A. J. Stewart Jr. in 1882. The South, East, and West boundaries and the subdivisional lines were surveyed by A. J. Stewart Jr. in 1882. The south boundary of sec. 31 was retraced by R. E. L. Collier, in 1895. The east boundary of the township was dependently resurveyed by Vern Lane, et. al., in 1959.

The following field notes are those of the dependent re-survey of the south boundary and the subdivisional lines of Township 16 South, Range 18 West.

Before restoring the corners, the lines of the original survey were retraced and diligent search made for any evidence of the original corners or any other calls of the original field note record.

The rules of proportionate measurement were applied to ascertain the position of lost corners, but not until exhausting every reasonable possibility of finding direct evidence for the control of each particular corner.

The survey was executed with W. & L. E. Gurley transits, serial numbers 461263 and 570614, constructed in accordance with the standard instrumental specifications of the Bureau of Land Management. The instruments were in good condition prior to the beginning of the survey and were maintained in proper adjustment throughout the progress of this survey.

Lines connecting previously established corners were run by random and true method, but for simplification of the record the random lines are omitted from the field notes.

Measurements herein contained were made with a narrow steel tape, 8 chains in length, graduated every link for the first 100 links and thereafter at intervals of 10 links. The tape was tested by comparison with a one chain standard steel tape and found to be correct. Measurements were made on the slope with the vertical angle of each interval ascertained by a clinometer in good adjustment; horizontal equivalents alone are entered in the field notes. All lines of this survey were run by direct method.

The direction of the lines of this survey were determined by reference to true meridians established on line by observations on Polaris or altitude observations on the sun. The lines were carried forward by sustained angulation being supplemented by other numerous altitude observations on the sun taken throughout the progress of the survey.

The geographic position for the southeast corner of the township is at latitude $39^{\circ}22'04.1''$ N. and longitude $113^{\circ}48'44.5''$ W. as adjusted from traverses to U.S.G.S. triangulation station "Hill Top" at latitude $39^{\circ}28'08.65''$ N., and longitude $114^{\circ}02'15.25''$ W., located N. $62^{\circ}44'$ W., 80.20 chains dist. from the $\frac{1}{2}$ sec. cor. of secs. 31 and 32, Township 15 South, Range 19 West.

Magnetic declination was read at a number of stations throughout the township and the average of these readings was found to be $16^{\circ}30'$ E.

Dependent Resurvey of the South Boundary, T. 16 S., R. 18 W.

CHAINS

Reestablishment of the Survey Executed by A. J. Stewart Jr., in 1882

Beginning at the cor. of Tps. 16 and 17 S., R. 18 W., monumented with a $2\frac{1}{2}$ in. iron post, set, mkd. and witnessed as described in the official record of the 1959 resurvey of T. 16 S., R. 17 W.

N. $89^{\circ}54'$ W., bet. secs. 1 and 36.

Over nearly level land through scattered shadscale.

Desc. 65 ft. over gently rolling SW. slope.

9.65 Wash, 120 lks. wide, 8 ft. deep, drains SW.

General Description

Township 16 South, Range 18 West, is located in Snake Valley, about 4 miles southeast of Gandy, Utah. It is mostly level desert land, with marshy meadow land in sections 6, 7, 8, 17, 18, 20, 21, 22, 27 and 28. The land in the northeast corner is low rolling foothills. The soil varies from alkali clay in the lowlands to sandy clay and gravel in the northeast portion. There is an old alkali lake bed in the southwest portion of the township, and a small dry lake in section 6. There is a ranch in the northeast portion of section 8. The road from Gandy to Cowboy Pass, enters the township in section 6, and bears S. 76° E., through sections 6 and 5, thence S. 33° E., through sections 9, 16, 15, 22, 27, 26, 35 and 36. There are numerous unimproved and trail roads throughout the township. The elevation varies from about 4,800 ft. above sea level in the southwest corner to 5,400 ft. above sea level in the northeast corner of the township. There is no timber in the township, and the undergrowth consists of scattered shadscale, greasewood, salt grass, salt brush, sagebrush, and rabbit brush.

CERTIFICATE OF SURVEY

I, **CRAIG P. SYLVESTER**, HEREBY CERTIFY upon honor that,
 in pursuance of special instructions bearing date of the 21st day of **March**, 19 **62**,
 I have supervised the dependent resurvey of the south boundary and the
 subdivisional lines of Township 16 South, Range 18 West,

of the **Salt Lake** Meridian, in the State of **Utah**, which
 are represented in the foregoing field notes as having been executed ~~by me~~ under my direction;
 and that said survey has been made in strict conformity with said special instructions, the Manual
 of Instructions for the Survey of the Public Lands of the United States, and in specific manner
 described in the foregoing field notes.

April 12, 1963

(Cadastral Surveyor)

CERTIFICATE OF APPROVAL

SUBMITTED FOR APPROVAL

Date OCT 9 1964

BUREAU OF LAND MANAGEMENT,
 Washington, D. C.

The foregoing field notes of the dependent resurvey of the South boundary and the
 subdivisional lines of Township 16 South, Range 18 West,

executed by Ferrel D. Reynolds and LaVern Griffin, Survey Aids, under super-
 vision of Craig P. Sylvester, Cadastral Surveyor,
 having been critically examined and found correct, are hereby approved.

JAN 26 1965

TOWNSHIP 17 SOUTH, RANGE 18 WEST

CHAINS

The N. bdy. of Township 17 South, Range 18 West, was surveyed by A. J. Stewart Jr., in 1882, and retracement of the N. bdy. of sec. 6 by R. E. L. Collier, in 1895. The S. bdy. was surveyed by A. J. Stewart Jr., in 1883, resurveyed by R. E. L. Collier, in 1895, and dependently resurveyed by Lacel Bland, in 1959. The E. bdy. was surveyed by A. J. Stewart Jr., in 1882, resurveyed by R. E. L. Collier, in 1895, and dependently resurveyed by Lacel Bland in 1959. The W. bdy. was surveyed by A. J. Stewart Jr., in 1883, and independently resurveyed by R. E. L. Collier, in 1895. The subdivisional lines were surveyed by R. E. L. Collier, in 1895.

The following field notes are those of the dependent resurvey of the subdivisional lines of Township 17 South Range 18 West. The notes of the S. and E. bdy. are in the official record of the 1959 dependent resurvey under group 407, of T. 17 S., R. 17 W., and T. 18 S., R. 18 W. The W. bdy. of T. 17 S., R. 18 W. is written up concurrently with the resurvey of T. 17 S., R. 19 W.

Before restoring the corners the lines of the original survey were retraced and diligent search made for any evidence of the original corners and other calls of the original field note record.

The rules of proportionate measurement were applied to ascertain the position of lost corners, but not until exhausting every reasonable possibility of finding direct evidence for the control of each particular corner.

The survey was executed with W. & L.E. Gurley solar transits, numbers 461263 and 570614 constructed in accordance with the standard instrumental specifications of the Bureau of Land Management. The instruments were in good condition prior to the beginning of the survey and were maintained in proper adjustment throughout the progress of this survey.

Lines connecting previously established corners were run by random and true method, but for simplification of the record, the random lines are omitted from the field notes.

Measurements herein contained were made with a narrow steel tape, 8 chains in length, graduated every link for the first 100 links and thereafter at intervals of 10 links. The tape was tested by comparison with a one chain standard steel tape and found to be correct. Measurements were made on the slope with the vertical angle of each interval ascertained by a clinometer in good adjustment; horizontal equivalents alone are entered in the field notes. All lines of this survey were run by direct method.

The direction of the lines of this survey were determined by reference to true meridians established on line by observations on Polaris or altitude observations on the sun. The lines were carried forward by sustained angulation being supplemented by other numerous altitude observations on the sun taken throughout the progress of the survey.

The geographic position for the southeast corner of the township is at latitude $39^{\circ}16'47.1''$ N. and longitude $113^{\circ}48'44.3''$ W. as adjusted from traverses to U.S.G.S. triangulation station "Hill Top" at latitude $39^{\circ}28'08.65''$ N. and longitude $114^{\circ}02'15.25''$ W., located N. $62^{\circ}44'$ W., 80.20 chs. dist. from the $\frac{1}{4}$ sec. cor. of secs. 31 and 32, Township 15 South, Range 19 West.

TOWNSHIP 17 SOUTH, RANGE 18 WEST

CHAINS

The magnetic declination was read at a number of stations throughout the township and the average of these readings was found to be $16^{\circ}30'$ East.

GENERAL DESCRIPTION

The vegetation in the township consists of saltbrush, shadscale, greasewood, and some sagebrush and is generally throughout the full township. The land is nearly all level except for a few scattered sand dunes with general drainage to the south. Soil is sand and clay with a loam base.

There are two barb wire fences running north and south and east and west. There is a dirt road from the Salt Marsh to the desert. There are no other permanent improvements in the township.

CERTIFICATE OF SURVEY

I, **CRAIG P. SYLVESTER**, HEREBY CERTIFY upon honor that,
 in pursuance of special instructions bearing date of the 21st day of **March**, 1962,
 I have supervised the dependent resurvey of the subdivisional lines of
Township 17 South, Range 18 West,

of the **Salt Lake** Meridian, in the State of **Utah**, which
 are represented in the foregoing field notes as having been executed by me and under my direction;
 and that said survey has been made in strict conformity with said special instructions, the Manual
 of Instructions for the Survey of the Public Lands of the United States, and in specific manner
 described in the foregoing field notes.

March 22, 1963
 (Date)

Craig P. Sylvester
 (Cadastral Surveyor)

 (Date)

 (Cadastral Surveyor)

CERTIFICATE OF APPROVAL

SUBMITTED FOR APPROVAL
 Date SEP 11 1964

BUREAU OF LAND MANAGEMENT,
 Washington, D. C.

The foregoing field notes of the dependent resurvey of the subdivisional lines
 of Township 17 South, Range 18 West,

executed by Ferrel D. Reynolds and LaVern Griffin, survey aids, under the
 supervision of Craig P. Sylvester, Cadastral Surveyor,
 having been critically examined and found correct, are hereby approved.

JAN 26 1965
 (Date)

E. E. Lemington
 (Chief, Division of Engineering)

CERTIFICATE OF TRANSCRIPT

I CERTIFY That the foregoing transcript of the field notes of the above-described surveys in
 _____ is a true copy of the original field notes.

Lines surveyed by Ferrel D. Reynolds _____

Lines surveyed by LaVern Griffin _____

Township 15 South, Range 19 West

CHAINS

The South boundary, (Third Standard Parallel South), was surveyed by Joseph Gorlinski in 1880, and was resurveyed by A. J. Stewart, Jr. in 1882. The East bdy., the North bdy., the West bdy., and the subdivisional lines were surveyed by A. J. Stewart, Jr. in 1882. The North bdy. was resurveyed by J. Dougall in 1915.

The following field notes are those of the dependent re-survey of the South bdy. (Third Standard Parallel South), the East bdy. and the subdivisional lines of Township 15 South, Range 19 West.

Before restoring the corners, the lines of the original survey were retraced and diligent search made for any evidence of the original corners or other calls of the original field note record. The rules of proportionate measurement were applied to ascertain the position of the lost corners after exhausting every possibility of finding direct evidence of the lost corners.

The survey was executed with W. & L. E. Gurley Solar Transits Nos. 461263 and 570614 constructed in accordance with the standard instrumental specifications of the Bureau of Land Management. The instruments were in good condition prior to the beginning of the survey and were maintained in proper adjustment throughout the progress of this survey.

Lines connecting previously established corners were run by random and true method, but for simplification of the record the random lines are omitted from the field notes.

Measurements herein contained were made with a narrow steel tape, 8 chains in length, graduated every link for the first 100 links and thereafter at intervals of 10 links. The tape was tested by comparison with a one chain standard steel tape and found to be correct. Measurements were made on the slope with the vertical angle of each interval ascertained by a clinometer in good adjustment; horizontal equivalents alone are entered in the field notes. All lines of this survey were run by direct method where the lines were accessible; lines inaccessible were run by traverse or triangulation methods. Distances to topography on lines run by traverse or triangulation are approximately as scaled from U. S. G. S. topographic sheets. The details of such traverses or triangulations have been thoroughly checked and verified, and in order to simplify the record the diagrams and reductions are omitted from these field notes.

The directions of the lines of this survey were determined by reference to true meridians established on line by observations on Polaris or altitude observations on the sun. The lines were carried forward by sustained angulation being supplemented by other numerous altitude observations on the sun taken throughout the progress of the survey.

The geographic position for the southeast corner of the township is at latitude $39^{\circ}27'21.8''$ N. and longitude $113^{\circ}55'32.8''$ W. as adjusted from traverses to U. S. G. S. triangulation station "Hilltop", at latitude $39^{\circ}28'08.65''$ N. and longitude $114^{\circ}02'15.25''$ W., located N. $62^{\circ}44'$ W. 80.20 chs. dist., from the $\frac{1}{4}$ sec. cor. of secs. 31 and 32.

Township 15 South, Range 19 West

CHAINS

The magnetic declination was read at a number of stations throughout the township and the average of these readings was found to be 16°30' East.

GENERAL DESCRIPTION

Township 15 South, Range 19 West, is located just north of Gandy, and is nearly level desert in the eastern portion, changing to rolling desert in the north and west portions. The southeast portion is mountainous. The soil is sandy clay in the eastern portion; gravel and sand in the western portion. There is no timber in the township, and the undergrowth is shadscale, salt grass, brush and greasewood. The only water is in Warm Creek, along the south boundary of sections 31 and 32. There are numerous unimproved roads in the township, and two gravel roads through the township. The Callao-Gandy-Baker road, enters the township on the north boundary in section 2, and bears wouthwest leaving the township on the south boundary of section 33. The Gandy-CowBoy Pass road, bears southeast through sections 33, 34, and leaves the township on the south boundary of section 35. The elevations varies from 4,800 ft. above sea level in the southeastern portion to about 6,000 in the southwest portion. The township is drained in a southeast direction by numerous washes.

GPO 834685

CERTIFICATE OF SURVEY

I, **Craig P. Sylvester**, HEREBY CERTIFY upon honor that,
in pursuance of special instructions bearing date of the 21 day of **March**, 1962,

I have supervised the dependent resurvey of the South boundary, (Third Standard Parallel South), the East boundary, and the subdivisional lines of Township 15 South, Range 19 West

of the **Salt Lake** Meridian, in the State of **Utah**, which
are represented in the foregoing field notes as having been executed ~~by me~~ under my direction;
and that said survey has been made in strict conformity with said special instructions, the Manual of Instructions for the Survey of the Public Lands of the United States, and in specific manner described in the foregoing field notes.

Salt Lake City, Utah
(Date)

Craig P. Sylvester
(Cadastral Surveyor)

March 5, 1963

Craig P. Sylvester
(Cadastral Surveyor)

CERTIFICATE OF APPROVAL

SUBMITTED FOR APPROVAL
Date JUN 9 1964

BUREAU OF LAND MANAGEMENT,
Washington, D. C.

The foregoing field notes of the dependent resurvey of the South boundary, (Third Standard Parallel South), the East boundary, and the subdivisional lines of Township 15 South, Range 19 West

executed by **Ferrel D. Reynolds** and **Lavern Griffin**, Survey Aids, under the supervision of **Craig P. Sylvester**, Cadastral Surveyor having been critically examined and found correct, are hereby approved.

JAN 26 1965
(Date)

CE Reynolds
(Chief, Division of Engineering)

CERTIFICATE OF TRANSCRIPT

I CERTIFY That the foregoing transcript of the field notes of the above-described surveys in
is a true copy of the original field notes.

_____ Lines surveyed by LaVern Griffin

_____ Lines surveyed by Ferrel D. Reynolds

Township 16 South, Range 19 West

CHAINS

The North boundary (Third Standard Parallel South) was surveyed by Joseph Gorlinski in 1880 and was resurveyed by A. J. Stewart Jr. in 1882. The South boundary was surveyed by A. J. Stewart Jr. in 1884, and was resurveyed by R. E. L. Collier in 1895. The East boundary was surveyed by A. J. Stewart Jr. in 1884. The West boundary was surveyed by A. J. Stewart Jr. in 1884. The subdivisional lines were surveyed by A. J. Stewart Jr. in 1884.

The following field notes are those of the dependent re-survey of the East boundary, the South boundary and the subdivisional lines of Township 16 South, Range 19 West.

Before restoring the corners, the lines of the original survey were retraced and a diligent search made for any evidence of the lost corners or other calls of the original field note record.

The rules of proportionate measurement were applied to ascertain the position of the lost corners only after exhausting every reasonable possibility of finding direct evidence of the lost corners.

The survey was executed with W. & L. E. Gurley solar transits Nos. 461263 and 570614 constructed in accordance with the standard instrumental specifications of the Bureau of Land Management. The instrument was in good condition prior to the beginning of the survey and was maintained in proper adjustment throughout the progress of this survey.

Lines connecting previously established corners were run by random and true method, but for simplification of the record, the random lines are omitted from the field notes.

Measurements herein contained were made with a narrow steel tape, 8 chains in length, graduated every link for the first 100 links and thereafter at intervals of 10 links. The tape was tested by comparison with a one chain standard steel tape and found to be correct. Measurements were made on the slope with the vertical angle of each interval ascertained by a clinometer in good adjustment; horizontal equivalents alone are entered in the field notes. All lines of this survey were run by direct method.

The direction of the lines of this survey were determined by reference to true meridians established on line by observations on Polaris or altitude observations on the sun. The lines were carried forward by sustained angulation being supplemented by other numerous altitude observations on the sun taken throughout the progress of the survey.

The geographic position for the southeast corner of the township is at latitude $39^{\circ}22'05.1''$ N. and longitude $113^{\circ}55'30.4''$ W. as adjusted from traverses to U.S.G.S. triangulation station "Hill Top" at latitude $39^{\circ}28'08.65''$ N. and longitude $114^{\circ}02'15.25''$ W., located N. $62^{\circ}44'$ W., 80.20 chs. dist. from the $\frac{1}{2}$ sec. cor. of secs. 31 and 32, Township 15 South, Range 19 West.

The magnetic declination was read at a number of stations throughout the township and the average of these readings was found to be $16^{\circ}30'$ East.

Dependent Resurvey of the East Boundary, T. 16 S., R. 19 W.

General Description

Township 16 South, Range 19 West, is located in Snake Valley at Gandy, Utah. Gandy is located in sec. 4. There are several ranches located in the northern portion of the township. The land is mostly level to gently rolling, with sandy clay loam and gravel soil. The vegetation is mostly shadscale and greasewood, with some rabbit and sagebrush and salt grass. There is no timber in the township. There is some marshy meadow land in sections 1, 2, 3, 10 and 11. Warm Creek enters the township in section 5, flowing southeast through sections 4 and 3. The main road from Gandy to Garrison enters the township at the north boundary of section 4, and bears southerly through the township. The road from Gandy to Cowboy Pass, enters the township at the north boundary of section 2 and bears southeasterly through secs. 2 and 1. There are numerous unimproved roads and jeep trails throughout the township. The elevation varies from 4,800 ft. in the east portion to 5,000 ft. above sea level in the west portion. The drainage is generally southeasterly.

FIELD ASSISTANTS

[illegible]

CERTIFICATE OF SURVEY

I, **CRAIG P. SYLVESTER**, HEREBY CERTIFY upon honor that,
 in pursuance of special instructions bearing date of the 21st day of **March**, 19 **62**,
 I have supervised the dependent resurvey of the South boundary, the East
 boundary, and the subdivisional lines of Township 16 South, Range
 19 West,

of the **Salt Lake** Meridian, in the State of **Utah**, which
 are represented in the foregoing field notes as having been executed by me and under my direction;
 and that said survey has been made in strict conformity with said special instructions, the Manual
 of Instructions for the Survey of the Public Lands of the United States, and in specific manner
 described in the foregoing field notes.

March 13, 1963

CERTIFICATE OF APPROVAL

SUBMITTED FOR APPROVAL

Date OCT 9 1964

BUREAU OF LAND MANAGEMENT,
 Washington, D. C.

The foregoing field notes of the dependent resurvey of the South boundary, the East
 boundary, and the subdivisional lines of Township 16 South, Range 19
 West,

executed by LaVern Griffin and Ferrel D. Reynolds, Survey Aids, under the
 supervision of Craig P. Sylvester, Cadastral Surveyor,
 having been critically examined and found correct, are hereby approved.

TOWNSHIP 17 SOUTH, RANGE 19 WEST

CHAINS

The N. bdy. was surveyed by A. J. Stewart Jr., in 1884, and was retraced by R. E. L. Collier in 1895. The S. bdy. was surveyed by A. J. Stewart Jr. in 1882, and was partially retraced in 1895 by R. E. L. Collier. The E. bdy. was surveyed by A. J. Stewart Jr. in 1883, and independently resurveyed by R. E. L. Collier in 1895. The W. bdy. and the subdivisional lines were surveyed by R. E. L. Collier in 1895.

The following field notes are those of the dependent re-survey of the S. bdy., the E. bdy., and the subdivisional lines of Township 17 South, Range 19 West.

Before restoring the corners, the lines of the original survey were retraced and a diligent search made for any evidence of the original corners or other calls of the original field note record. The rules of proportionate measurement were applied to ascertain the position of the lost corners, but not until exhausting every reasonable possibility of finding direct evidence of the lost corners.

The survey was executed with W. & L. E. Gurley Solar Transits Nos. 461263 and 570614 constructed in accordance with the standard instrumental specifications of the Bureau of Land Management. The instruments were in good condition prior to the beginning of the survey and were maintained in proper adjustment throughout the progress of this survey.

Lines connecting previously established corners were run by random and true method, but for simplification of the record, the random lines are omitted from the field notes.

Measurements herein contained were made with a narrow steel tape, 8 chains in length, graduated every link for the first 100 links and thereafter at intervals of 10 links. The tape was tested by comparison with a one chain standard steel tape and found to be correct. Measurements were made on the slope with the vertical angle of each interval ascertained by a clinometer in good adjustment; horizontal equivalents alone are entered in the field notes. All lines of this survey were run by direct method.

The direction of the lines of this survey were determined by reference to true meridians established on line by observations on Polaris or altitude observations on the sun. The lines were carried forward by sustained angulation being supplemented by other numerous altitude observations on the sun taken throughout the progress of the survey.

The geographic position for the southeast corner of the township is at latitude $39^{\circ}16'47.5''$ N. and longitude $113^{\circ}55'29.5''$ W. as adjusted from traverses to U.S.G.S. triangulation station "Hilltop," at latitude $39^{\circ}28'08.65''$ N. and longitude $114^{\circ}02'15.25''$ W., located N. $62^{\circ}44'$ W., 80.20 chs. dist. from the $\frac{1}{4}$ sec. cor. of secs. 31 and 32, Township 15 South, Range 19 West.

The magnetic declination was read at a number of stations throughout the township and the average of these readings was found to be $16^{\circ}30'$ East.

Dependent Resurvey of the East Boundary, T. 17 S., R. 19 W.

CHAINS

Reestablishment of the Resurvey Executed by R. E. L. Collier in 1895.

GENERAL DESCRIPTION

Township 17 South, Range 19 West, is located in the Snake Valley, about 6 miles south of Gandy, Utah. The land in the township is mostly level desert land, except the south west portion, which is gently rolling foot hills. The soil varies from sandy clay alkali in the eastern portion to gravelly, sandy loam in the western portion. The elevation is about 4,200 ft. above sea level. There is no water in the township. The main road from Gandy to Garrison bears northerly and southerly through the western portion of the township. There are numerous trail roads and unimproved dirt roads throughout the township. The drainage of the area is in a southeasterly direction by numerous washes.

CERTIFICATE OF SURVEY

I, **CRAIG P. SYLVESTER**, HEREBY CERTIFY upon honor that,
 in pursuance of special instructions bearing date of the 21st day of **March**, 19 **62**,
 I have supervised the dependent resurvey of the E. boundary, the S. boundary,
 and the subdivisional lines of Township 17 South, Range 19 West,

of the **Salt Lake** Meridian, in the State of **Utah**, which
 are represented in the foregoing field notes as having been executed ~~by me~~ under my direction;
 and that said survey has been made in strict conformity with said special instructions, the Manual
 of Instructions for the Survey of the Public Lands of the United States, and in specific manner
 described in the foregoing field notes.

BUREAU OF LAND MANAGEMENT,
 Washington, D. C.

The foregoing field notes of the dependent resurvey of the E. boundary, the S. boundary,
 and the subdivisional lines of Township 17 South, Range 19 West,

executed by Ferrel D. Reynolds and LaVern Griffin, Survey Aids, under the supervision of Craig P. Sylvester, Cadastral Surveyor,
 having been critically examined and found correct, are hereby approved.

JAN 26 1965

ORIGINAL
FIELD NOTES

OF THE

RETRACEMENT OF A PORTION OF THE UTAH AND NEVADA STATE BOUNDARY

ALONG THE WEST BOUNDARY OF TOWNSHIP 15 SOUTH, RANGE 20 WEST

BETWEEN THE 124TH AND 130TH MILE CORNERS:

AN

INDEPENDENT RESURVEY OF THE SOUTH BOUNDARY;

A

DEPENDENT RESURVEY OF THE EAST BOUNDARY;

AND THE

SURVEY OF THE SUBDIVISIONAL LINES

OF

TOWNSHIP 15 SOUTH, RANGE 20 WEST

Of the Salt Lake Meridian,

In the State of Utah

EXECUTED BY

Craig P. Sylvester, Cadastral Surveyor

Under special instructions dated March 21, 19 62, which provided for the surveys
included under Group Number 451, approved March 29, 1962,
and assignment instructions dated August 14, 19 62.

Survey commenced December 10, 19 62

Survey completed December 13, 19 62

UTAH-NEVADA STATE BOUNDARY

Township 15 South, Range 20 West

CHAINS

The north boundary was surveyed by J. W. Dougall in 1925, and the record appears in the field notes of T. 14 S., R. 20 W. The east boundary was surveyed by A. J. Stewart, Jr., in 1882, and the record appears in the field notes of T. 15 S., R. 19 W. The south boundary (the Third Standard Parallel South) was surveyed by J. Gorlinski in 1880, and the record appears in the field notes of T. 15 S., R. 20 W. The west boundary (the Utah and Nevada State Boundary between the 123rd and 130th mile cors.) was surveyed by I. E. James in 1870, and the record appears in the survey of the eastern boundary of Nevada. The portion of the west bdy., bet. the 123rd and 124th mile cors., was resurveyed by J. W. Dougall in 1915, and the record appears in the field notes of T. 14 S., R. 20 W., Utah.

The following field notes are those of the independent resurvey of the south boundary, the dependent resurvey of the east boundary, the retracement of a portion of the west boundary (the Utah and Nevada State boundary between the 124th and 130th mile cors.), and the survey of the subdivisional lines of T. 15 S., R. 20 W.

The survey was executed with a W. and L. E. Gurley Solar Transit No. 570614 constructed in accordance with the standard instrumental specifications of the Bureau of Land Management. The instrument was in good condition prior to the beginning of the survey and was maintained in proper adjustment throughout the progress of the survey.

Lines connecting previously established corners were run by random and true method, but for simplification of the record, the random lines are omitted from these field notes.

Measurements herein contained were made with a narrow steel tape, 8 chains in length, graduated every link for the first 100 links, and thereafter at intervals of 10 links. The tape was tested by comparison with a 1-chain standard steel tape and found to be correct. Measurements were made on the slope with vertical angles of each interval ascertained by a clinometer in good adjustment; horizontal equivalents alone are entered in the field notes. All lines of this survey were run by the direct method where the lines were accessible; lines inaccessible were run by traverse or triangulation methods. Distance to topography on lines run by traverse and triangulation methods are approximate as scaled from U. S. G. S. topographic sheets. The details of such traverses and triangulations have been thoroughly checked and verified, and in order to simplify the record, the diagrams and reductions are omitted from these field notes.

The direction of the lines of this survey were determined by reference to true meridians established on line by hour angle observations on Polaris or altitude observations on the sun. They were carried forward by sustained angulation, being supplemented by other numerous altitude observations on the sun taken throughout the progress of the survey.

Before restoring lost corners, the lines of the original survey were retraced and a diligent search made for any evidence of the original corners. The rules of proportionate measurement were applied to ascertain the

Township 15 South, Range 20 West

CHAINS

position of the lost corner after every reasonable possibility of finding evidence of the corner had been exhausted.

The geographic position for the southeast corner of the township is in latitude $39^{\circ}27'17''$ N., and longitude $114^{\circ}02'22''$ W., as determined by traverse from United States Geological Survey triangulation station "Hilltop" situated $N.62^{\circ}44'$ W., 80.20 chs. dist. from the $\frac{1}{4}$ sec. cor. of secs. 31 and 32, T. 15 S., R. 19 W.

The magnetic declination was read at a number of stations throughout the township and the average of the several readings was found to be $16^{\circ}30'$ E.

Retracement of the Utah and Nevada State Line, along the West Boundary of T. 15 S., R. 20 W., between the 124th and 130th mile corners.

Retracement of the Survey Executed
by I. E. James in 1870

The 124th mile corner on the Utah and Nevada State Boundary, monumented by an iron post, 3 ins. diam., set, marked and witnessed as described in the official record of the 1915 survey of T. 14 S., R. 20 W.

From this cor. the closing cor. for Tps. 14 and 15 S., R. 20 W. bears $N.0^{\circ}10'$ E., 26.54 chs. dist., monumented by an iron post, 3 ins. diam., set, marked and witnessed as described in the official record of the 1915 survey of T. 14 S., R. 20 W.

$S. 0^{\circ}11'$ W., along the 125th mile of the Utah and Nevada State Boundary.

Over rolling land; covered with shadscale; desc. 50 ft. over rolling SE. slope.

26.70 Wash, 20 lks. wide, 2 ft. deep, drains NE.

36.90 Draw, drains SE.

39.60 N. rim of wide draw, bears E. and W.; desc. 165 ft. over S. slope.

52.80 Wash, 3.00 chs. wide, 3 ft. deep, drains E.; asc. 160 ft. over N. slope.

61.60 Wash, 30 lks. wide, 3 ft. deep, drains NE.

68.70 S. rim of same draw, bears E. and W.

73.90 Unimproved dirt road, bears E. and W.

79.91 The original 125th mile corner, on the Utah and Nevada State Boundary, monumented by a stone, $4 \times 2 \times 2$ ins., marked "X", and buried in a mound of earth.

At the mile cor. point.

Set an iron post, 30 ins. long, $2\frac{1}{2}$ ins. diam., 24 ins. in the ground, with brass cap mkd.

Retracement of the Utah and Nevada State Line, along the West Boundary of T. 15 S., R. 20 W., between the 124th and 130th mile corners.

General Description

Most of the land in Township 15 South, Range 20 West is on a rolling bench, with the soil being sandy and rocky. General drainage is to the east. The north portion of section 36 and all of section 25 is on a rocky and ledgy west slope of a small mountain. Drainage from this portion of the Township is to the Southwest, then south-east, to a large wash draining east. Elevation is about 5,000 feet above sea level.

Vegetation consists mostly of shadscale, with small amounts of bunch grass scattered throughout the township.

There are no permanent habitations within the area.

CERTIFICATE OF SURVEY

I, **Craig P. Sylvester**, HEREBY CERTIFY upon honor that, in pursuance of special instructions bearing date of the 21st day of **March**, 1962, I have retraced a portion of the Utah and Nevada State Boundary, along the West boundary of T. 15 S., R. 20 W., between the 124th and 130th mile corners. Independently resurveyed the South boundary. Dependently resurveyed the East boundary, and surveyed the subdivisional lines of Township 15 South, Range 20 West.

At **Salt Lake** Meridian, in the State of **Utah**, which are represented in the foregoing field notes as having been executed by me and under my direction, and that said survey has been made in strict conformity with said special instructions, the Manual of Instructions for the Survey of the Public Lands of the United States, and in specific manner described in the foregoing field notes.

March 10, 1963

CERTIFICATE OF APPROVAL

RECEIVED FOR APPROVAL
JUN 9 1964

BUREAU OF LAND MANAGEMENT,
Washington, D. C.

The foregoing field notes of the retracement of a portion of the Utah and Nevada State Boundary, along the West boundary of T. 15 S., R. 20 W., between the 124th and 130th mile corners; independent resurvey of the South boundary; dependent resurvey of the East boundary; and the survey of the subdivisional lines of Township 15 South, Range 20 West.

executed by **Craig P. Sylvester, Cadastral Surveyor**

Having been critically examined and found correct, are hereby approved.

JUN 16 1965
(Date)

E. E. Livingston
(Chief, Division of Engineering)

CERTIFICATE OF TRANSCRIPT

I CERTIFY That the foregoing transcript of the field notes of the above-described surveys is a true and correct copy of the original field notes.

UTAH-NEVADA STATE BOUNDARY

TOWNSHIP 16 SOUTH, RANGE 20 WEST

CHAINS

The north boundary was surveyed by J. Gorlinski in 1870, and concurrently resurveyed and the record appears in the field notes of T. 15 S., R. 20 W. The east boundary was surveyed by A. J. Stewart Jr. in 1884, and the record appears in the field notes of T. 16 S., R. 19 W. The south boundary was surveyed by R. E. L. Collier in 1895, and the record appears in the field notes of the survey of the north boundary of T. 17 S., R. 20 W. The west boundary (the Utah and Nevada State boundary between the 129th and 136th mile corners) was surveyed by I. E. James in 1870, and the record appears in the survey of the Eastern boundary of Nevada. The portion of the west boundary between the 129th and 130th mile corners was dependently resurveyed concurrently, and the record appears in the field notes of T. 15 S., R. 20 W.

The following field notes are those of a dependent resurvey of the south and east boundaries and a portion of the west boundary (the Utah and Nevada State Boundary between the 130th and 136th mile corners), and the survey of the subdivisional lines of T. 16 S., R. 20 W.

The survey was executed with a W. & L. E. Gurley solar transit No. 570614, constructed in accordance with the standard instrumental specifications of the Bureau of Land Management. The instrument was in good condition prior to the beginning of the survey and was maintained in proper adjustment throughout the progress of the survey.

Corners on the east-west lines were set on the true latitudinal curve. Lines connecting previously established corners were run by random and true method, but for simplification of the record, the random lines are omitted from the field notes.

Measurements herein contained were made with a narrow steel tape, 8 chains in length, graduated every link for the first 100 links, and thereafter at intervals of 10 links. The tape was tested by a 1 chain standard steel tape and found to be correct. Measurements were made on the slope with the vertical angle of each interval ascertained by a clinometer in good adjustment; horizontal equivalents alone are entered in the field notes. All lines of this survey were run by the direct method.

The direction of the lines of survey were determined by reference to true meridians established on line by hour angle observations on Polaris, or altitude observations on the sun. They were carried forward by sustained angulation being supplemented by numerous other altitude observations on the sun taken throughout the progress of the survey.

Before restoring lost corners, the lines of the original survey were retraced and a diligent search made for any evidence of the original corners. The rules of proportionate measurement were applied to ascertain the position of the lost corner after every reasonable possibility of finding direct evidence of the corner had been exhausted.

The geographic position for the southeast corner of the township is in latitude $39^{\circ}22'00.7''$ N. and longitude $114^{\circ}02'14.1''$ W., as determined by traverse from U.S.G.S. triangulation station "Hilltop" at latitude $39^{\circ}28'08.65''$ N. and longitude $114^{\circ}02'15.25''$ W., located N. $62^{\circ}44'$ W. 80.20 chs. dist. from the $\frac{1}{2}$ sec. cor. of secs. 31 and 32, T. 15 S., R. 19 W. The magnetic declination was read at a number of stations throughout the township and the average of the several readings was found to be $16^{\circ}30'$ E.

Dependent Resurvey of the Utah and Nevada State Boundary along the West Boundary of T. 16 S., R. 20 W., between the 130th and 136th mile corners.

CHAINS

Retracement of the Survey executed by I. E. James in 1870

Beginning at the 130th mile cor. on the Utah and Nevada State Boundary, monumented by an iron post, 2½ ins. diam., set, mkd. and witnessed as described in the field notes of the concurrent retracement of the Utah and Nevada State Boundary, in T. 15 S., R. 20 W.

From this cor. the standard closing cor. for T. 15 S., R. 20 W., bears N. 0°11' E., 19.16 chs. dist., monumented by an iron post, 2½ ins. diam., set, mkd., and witnessed as described in the field notes of the concurrent Independent Resurvey of the South Boundary, T. 15 S., R. 20 W.

GENERAL DESCRIPTION

Township 16 South, Range 20 West, is on a gently rolling and slightly broken bench with drainage to the east. The soil is sandy and rocky. Elevation is about 5,000 feet above sea level. Vegetation consists of shadscale and small amounts of bunch grass scattered throughout the township.

There are no permanent habitations within the area.

CERTIFICATE OF SURVEY

I, **CRAIG P. SYLVESTER**, HEREBY CERTIFY upon honor that,
 in pursuance of special instructions bearing date of the 21st day of **March**, 19 **62**,
 I have dependently resurveyed a portion of the Utah and Nevada State
 Boundary, along the West boundary of T. 16 S., R. 20 W., between
 the 130th and 136th mile corners, and the South and East boundaries,
 and surveyed the subdivisional lines of Township 16 South, Range 20 West
 of the **Salt Lake** Meridian, in the State of **Utah**, which
 are represented in the foregoing field notes as having been executed by me and under my direction;
 and that said survey has been made in strict conformity with said special instructions, the Manual
 of Instructions for the Survey of the Public Lands of the United States, and in specific manner
 described in the foregoing field notes.

April 15, 1963

 BUREAU OF LAND MANAGEMENT,
 Washington, D. C.

The foregoing field notes of the dependent resurvey of a portion of the Utah and
 Nevada State Boundary, along the West boundary of T. 16 S., R. 20 W.,
 between the 130th and 136th mile cors., and the South and East
 boundaries, and the survey of the subdivisional lines of Township 16
 South, Range 20 West,

executed by **Craig P. Sylvester, Cadastral Surveyor**,
 having been critically examined and found correct, are hereby approved.

UTAH - NEVADA STATE BOUNDARY

TOWNSHIP 17 SOUTH, RANGE 20 WEST

CHAINS

The North boundary was surveyed by R. E. L. Collier in 1895, and concurrently resurveyed, and its record appears in the field notes of the resurvey of T. 16 S., R. 20 W. The east boundary was surveyed by R. E. L. Collier in 1895, and its record appears in the field notes of T. 17 S., R. 20 W. The south boundary was surveyed by A. J. Stewart Jr., in 1882; and retraced by R. E. L. Collier in 1895, and its record appears in the field notes of the resurvey of T. 17 S., R. 20 W. The west boundary (the Utah and Nevada State boundary, between the 135th and 142nd mile corners) was surveyed by I. E. James in 1870, and the record appears in the survey of the eastern boundary of Nevada. The subdivisional lines were surveyed by R. E. L. Collier in 1895, and its record appears in the field notes of T. 17 S., R. 20 W. The portion of the west boundary between the 135th and 136th mile corners was retraced concurrently, and its record appears in the field notes of the resurvey of T. 16 S., R. 20 W.

The following field notes are those of a dependent resurvey of the south and east boundaries and a portion of the west boundary (the Utah and Nevada State boundary, between the 136th and 142nd mile corners), and the subdivisional lines of T. 17 S., R. 20 W.

The survey was executed with a W. & L. E. Gurley Solar transit No. 570614, constructed in accordance with the standard instrumental specifications of the Bureau of Land Management. The instrument was in good condition prior to the beginning of the survey and was maintained in proper adjustment throughout the progress of the survey.

Lines connecting previously established corners were run by random and true method, but for simplification of the record, the random lines are omitted from these field notes.

Measurements herein contained were made with a narrow steel tape, 8 chains in length, graduated every link for the first 100 links, and thereafter at intervals of 10 links. The tape was tested by a 1 chain standard steel tape and found to be correct. Measurements were made on the slope with the vertical angle of each interval, ascertained by a clinometer in good adjustment; horizontal equivalents alone are entered in the field notes. All lines of the survey were run by direct method.

The direction of the lines of this survey were determined by reference to true meridians established on line by hour angle observations on Polaris, or altitude observations on the sun. They were carried forward by sustained angulation being supplemented by other numerous altitude observations on the sun taken throughout the progress of the survey.

Before restoring the corners, the lines of the original survey were retraced; and a diligent search made for any evidence of the original corners. The rules of proportionate measurement were applied to ascertain the position of the lost corner after every reasonable possibility of finding direct evidence of the corner had been exhausted.

The geographic position for the southeast corner of the township is at latitude $39^{\circ}16'46.1''$ N. and longitude $114^{\circ}02'14.3''$ W., as determined by traverse from U. S. G. S. triangulation station "Hilltop," at latitude $39^{\circ}28'08.65''$ N. and longitude $114^{\circ}02'15.25''$ W., located N. $62^{\circ}44'$ W., 80.20 chs. dist. from the $\frac{1}{4}$ sec. cor. of secs. 31 and 32, Township 15 South, Range 19 West.

TOWNSHIP 17 SOUTH, RANGE 20 WEST

CHAINS

The magnetic declination was read at a number of stations throughout the township and the average of the several readings was found to be $16^{\circ}30'$ E.

Dependent Resurvey of the Utah and Nevada State Boundary, along the West Boundary of T. 17 S., R. 20 W., between the 136th and 142nd mile corners.

Reestablishment of the Survey Executed by I. E. James in 1870.

Beginning at the 136th mile cor. on the Utah and Nevada State Boundary, monumented by an iron post, $2\frac{1}{2}$ ins. diam., set, mkd. and witnessed as described in the field notes of the resurvey of T. 16 S., R. 20 W.

General Description

Township 17 South, Range 20 West is on a gently rolling and slightly broken bench, with drainage to the East. The soil is sandy and rocky. The elevation is about 5,000 feet above sea level. Vegetation consists of shade scale and bunch grass.

Smith Creek, which was dry at the time of this survey, crosses the southern part of section 12, draining generally N. 73° E.

There are no permanent habitations in the area.

CERTIFICATE OF SURVEY

I, **Craig P. Sylvester**, HEREBY CERTIFY upon honor that,
 in pursuance of special instructions bearing date of the **21st** day of **March**, 19 **62**,
 I have dependently resurveyed a portion of the Utah and Nevada State boundary
 along the West boundary of T. 17 S., R. 20 W., between the 136th and 142nd
 mile corners, and the South and East boundaries and the subdivisional lines
 of Township 17 South, Range 20 West.

of the **Salt Lake** Meridian, in the State of **Utah**, which
 are represented in the foregoing field notes as having been executed by me and under my direction;
 and that said survey has been made in strict conformity with said special instructions, the Manual
 of Instructions for the Survey of the Public Lands of the United States, and in specific manner
 described in the foregoing field notes.

April 15, 1963

Township 41 South, Range 7 West

CHAINS

The northwest portion of T. 41 S., R. 7 W., Salt Lake Meridian, Utah, was originally surveyed by T. C. Bailey, Deputy Surveyor, in 1876, and shown upon plat approved August 3, 1877. The remainder of the township was surveyed in 1921 and 1923, under the direction of the General Land Office, and shown on plat accepted June 5, 1926. At that time the out boundaries of the Bailey survey were resurveyed. The following field notes are those of a dependent resurvey of portions of secs. 7, 8, 17 and 18; the subdivision survey of the NW. $\frac{1}{4}$ sec. 17, and re-monumentation of $\frac{1}{4}$ sec. cor. of secs. 4 and 5.

This survey was executed with a Gurley light mountain transit, serial number 541327, constructed in accordance with the standard specifications of the Bureau of Land Management, in good condition and adjustment. The instrument is equipped with improved telescopic solar attachment; the horizontal circle has a diameter of $4\frac{1}{2}$ inches, with two double opposite verniers reading to 20 seconds. The azimuths of the lines were determined from a meridian established by direct observations on the sun and checked by an hour angle observation upon Polaris - and carried forward by the method of deflection angles. The measurements were made with a narrow steel tape, 8 chains in length, graduated every link for the first 100 links and the balance at intervals of 10 links. The tape was tested by comparison with a 1-chain steel tape and found correct. The measurements were made on the slope, and the vertical angle of each interval was ascertained by two clinometers in good adjustment. Only the horizontal equivalents are entered in the field note record.

A portion of the lines on this survey extends across the town of Mt. Carmel and over improved farm lands, being obstructed by buildings, trees, etc. where direct measurements were impracticable, therefore distances were determined by triangulations and traverses, all carefully checked. No detailed topography was recorded in these instances.

The geographic position for the southeast cor. of sec. 17 of this township is in latitude $37^{\circ}14'16''$ N., and longitude $112^{\circ}39'00''$ W., as scaled from U.S.G.S. Kanab Quadrangle, 1957. The magnetic declination is approximately $15\frac{1}{2}^{\circ}$ E.

Dependent Resurvey of Subdivision, T. 41 S., R. 7 W.

Reestablishment of surveys executed by T. C. Bailey,
Deputy Surveyor, in 1876

Beginning at the original cor. of secs. 17, 18, 19 and 20, which is mkd. by a sandstone, 16x8x6 ins., properly mkd. with 5 notches on E. and 3 notches on S. side, firmly set, surrounded by a mound of stone.

At the cor. point

Set an iron post, 30 ins. long, $2\frac{1}{2}$ ins. diam., 24 ins. in the ground, with original cor. buried along NW. side, with brass cap mkd.

General Description

The portion of T. 41 S., R. 7 W., embraced within this resurvey comprises of rolling to broken bench lands covered with a medium dense stand of juniper and pinon timber, and nearly level valley land along the Virgin River and the Muddy Creek. The elevation ranges from about 5300 to 5600 ft. above sea level. The Virgin River flows southerly through secs. 8 and 17 and the southeast corner of sec. 18. Muddy Creek flows southerly through secs. 7 and 18, joining the Virgin River in sec. 19. Most of the water in these streams has been diverted into ditches and used for irrigation. The valley lands are mostly under cultivation. The town of Mt. Carmel is located in west part of sec. 17 and along east side of sec. 18. U. S. Highway No. 89 passes through the center of town in a northeast and southwest direction.

CERTIFICATE OF SURVEY

I, **Andrew Nelson, Cadastral Surveyor**, HEREBY CERTIFY upon honor that,
 in pursuance of special instructions bearing date of the 10th day of **May**, 1963,
 I have made a dependent resurvey of portion of the subdivisions, subdivi-
 sional survey of the NW $\frac{1}{4}$ of Section 17, and remonumentation of $\frac{1}{4}$ sec. corner
 secs. 4 and 5 in T. 41 S., R. 7 W.

of the **Salt Lake** Meridian, in the State of **Utah**, which
 are represented in the foregoing field notes as having been executed by me and under my direction;
 and that said survey has been made in strict conformity with said special instructions, the Manual
 of Instructions for the Survey of the Public Lands of the United States, and in specific manner
 described in the foregoing field notes.

November 20, 1963

(Cadastral Surveyor)

CERTIFICATE OF APPROVAL

SUBMITTED FOR APPROVAL
 Date **OCT 22 1964**

BUREAU OF LAND MANAGEMENT,
 Washington, D. C.

The foregoing field notes of the dependent resurvey of portion of the subdivisions,
 subdivisional survey of the NW $\frac{1}{4}$ of section 17, and remonumentation of $\frac{1}{4}$
 sec. corner secs. 4 and 5 in T. 41 S., R. 7 W.

executed by **Andrew Nelson, Cadastral Surveyor**

having been critically examined and found correct, are hereby approved.

Dependent Resurvey of a Portion of the East Boundary of Township 8 South, Range 21 East, Salt Lake Meridian, Utah

CHAIN

The East boundary of T. 8 S., R. 21 E., of the Salt Lake Meridian, Utah, was surveyed by E. Buettner, in 1879, and was dependently resurveyed by D. G. Major, in 1882; in 1944, J. C. Clark dependently resurveyed the north one mile in connection with surveys in T. 8 S., R. 22 E.

The following field notes are those of the dependent resurvey of a portion of the East boundary of T. 8 S., R. 21 E. The resurvey was initiated at the official request of the District Manager, Bureau of Land Management, to relocate lost corners and help to facilitate in the drilling for oil in the area.

Before restoring the corners, the lines of the resurvey were retraced and a diligent search made for any evidence of the original corners, and other calls of the field note record. When duly identified, the corner positions were remonumented.

The survey was executed in accordance with the specifications as set forth in the Manual of Instructions, 1947, and the Special Instructions dated June 18, 1963. The rules of proportionate measurement were applied in order to ascertain the position of lost corners, after completing the necessary retracements to connect with the identified corner locations, but not until exhausting every reasonable possibility of finding direct evidence for the control of each particular corner. The direction of the lines of this resurvey were determined by the solar transit method. All measurements were made on the slope and the vertical angle of each interval ascertained by a clinometer in good adjustment. The horizontal equivalents alone are entered in the field note record. The length of all lines were determined by chaining.

The geographic position for the corner of secs. 25, 30, 31 and 36 is at latitude 40°05'13" N. and longitude 109°29'31" W., as scaled from a Soil Conservation Service planimetric map, Utah No. 126.

Dependent Resurvey of a Portion of the East Boundary of Township 8 South, Range 21 East, Salt Lake Meridian, Utah

Reestablishment of the Resurvey Executed by D. G. Major, in 1882

Beginning at the cor. of secs. 25, 30, 31 and 35, monumented by a sandstone, 6x6x14 ins., firmly set in the ground and mkd. with 1 groove on the south and 5 grooves on the north face, and with a mound of stone around the cor.

At the cor. point

Set an iron post, 30 ins. long, 2½ ins. diam., 24 ins. in the ground, with brass cap mkd.

Dependent Resurvey of a Portion of the East Boundary of
Township 8 South, Range 21 East, Salt Lake Meridian, Utah

CHAINS

Land, nearly level desert.
Soil, sandy clay.
Timber, none.
Undergrowth, medium dense shadscale, greasewood, grass
and weeds.

General Description

The land along and around this resurveyed line is mostly
gently rolling desert. The soil is a sandy clay, and
supports a medium dense growth of shadscale, sagebrush,
greasewood, grass and weeds, over most of the area. The
drainage is to the S. and SW. No permanent habitations
or water were noted in the area. A large amount of
drilling for gas and oil has been done and is still being
carried on in the area.

CERTIFICATE OF SURVEY

I, **FRED R. CHAPPELL**, HEREBY CERTIFY upon honor that,
 in pursuance of special instructions bearing date of the 18th day of **June**, 19 **63**,
 I have dependently resurveyed a portion of the East boundary of Township 8
 South, Range 21 East, between the corner of sections 25, 30, 31 and 36, and
 the corner of sections 1, 6, 7 and 12,

of the **Salt Lake** Meridian, in the State of **Utah**, which
 are represented in the foregoing field notes as having been executed by me and under my direction;
 and that said survey has been made in strict conformity with said special instructions, the Manual
 of Instructions for the Survey of the Public Lands of the United States, and in specific manner
 described in the foregoing field notes.

BUREAU OF LAND MANAGEMENT,
 Washington, D. C.

The foregoing field notes of the dependent resurvey of a portion of the East
 Boundary of Township 8 South, Range 21 East, between the corner of sections
 25, 30, 31 and 36 and the corner of sections 1, 6, 7 and 12,

executed by **Fred R. Chappell**, Cadastral Surveyor,
 having been critically examined and found correct, are hereby approved.

Exchange Survey No. 220

CHAINS

This survey was made with a K&E one-minute optical transit, Serial No. 624146. The instrument was in good condition at the time of the survey and all adjustments were in good order.

All azimuths in this record were determined by the method of deflection angles referred to the meridian determined by an observation along the south line of section 7, Township 38 South, Range 7 West, Salt Lake Base and Meridian.

The lines were measured with a steel tape, 300 ft. in length, graduated every foot for 100 ft. and the remainder at intervals of 10 ft.; this tape was compared with a standard at the time of beginning the survey and found correct.

The magnetic declination observed throughout the survey gave a uniform value of 16°00' E.

Exchange Survey No. 220

From the $\frac{1}{4}$ cor. of secs. 6 and 7, T. 38 S., R. 7 W., S.L.B. & M., monumented with an iron post, 1 in. diam., set, mkd. and witnessed as described in the official record.

CERTIFICATE OF SURVEY

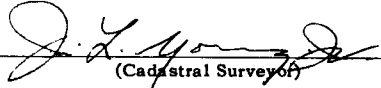

I, J. L. Young, Jr., Cadastral Surveyor, HEREBY CERTIFY upon honor that,
in pursuance of special instructions bearing date of the 10th day of February, 1964,

~~XXXX~~

Exchange Survey No. 220 was executed by Ken G. Knight,
L.S. 2599, Utah, under my supervision and is located
in Section 7, T38S, R7W,

of the Salt Lake Meridian, in the State of Utah, which
are represented in the foregoing field notes as having been executed ~~by me and~~ under my direction;
and that said survey has been made in strict conformity with said special instructions, the Manual
of Instructions for the Survey of the Public Lands of the United States, and in specific manner
described in the foregoing field notes.

January 26, 1965

CERTIFICATE OF APPROVAL

SUBMITTED FOR APPROVAL

Date JAN 26 1965

BUREAU OF LAND MANAGEMENT,
Washington, D. C.

The foregoing field notes of the Exchange Survey No. 220 located in Section 7,
T38S, R7W, Salt Lake Meridian, Utah

executed by Ken G. Knight, L.S. 2599, Utah, under the supervision of J. L.
Young, Jr., Cadastral Surveyor, U. S. Forest Service
having been critically examined and found correct, are hereby approved.

MAR 24 1965

Portions of the East Boundary and Subdivision
Township 39 South, Range 15 West

CHAINS

A portion of the East and West boundaries were surveyed by T. C. Bailey, in 1877. A portion of the subdivision was surveyed by Bailey and Burrill, in 1877.

The following field notes are those of a dependent resurvey of a portion of the East boundary and a portion of the subdivision of T. 39 S., R. 15 W.

The survey was executed in accordance with the specifications as set forth in the Manual of Instructions, 1947, and the Special Instructions dated April 29, 1964. Corners on the east-west lines were set on the true latitudinal curve. Lines connecting previously established corners were run by random and true method, but for simplification of the record, the random lines are omitted from these field notes. Measurements were made on the slope with vertical angles of each interval ascertained by a clinometer in good adjustment; horizontal equivalents alone are entered in the field notes. All lines of this survey were run by the direct method where the lines were accessible; lines inaccessible were run by traverse or triangulation methods. Distances to topography on lines run by traverse and triangulation methods are approximate, as scaled from U.S.G.S. topographic sheets. The details of such traverses and triangulations have been thoroughly checked and verified, and in order to simplify the records, the diagrams and reductions are omitted from these field notes.

The direction of the lines of this survey were determined by reference to true meridians established on line by hour angle observations on Polaris or altitude observations on the sun. They were carried forward by sustained angulation, being supplemented by other numerous altitude observations on the sun taken throughout the progress of the survey.

Before restoring lost corners, the lines of the original survey were retraced and a diligent search made for any evidence of the original corners. The rules of proportionate measurement were applied to ascertain the position of the lost corner after every reasonable possibility of finding direct evidence of the corner had been exhausted.

The geographic position for the $\frac{1}{2}$ sec. corner of secs. 25 and 30 on the East boundary of the township is in latitude $37^{\circ}21'59''$ N. and longitude $113^{\circ}28'45''$ W. as scaled from U.S.G.S. topographic sheet "New Harmony, Utah."

The magnetic declination was read at a number of stations through the survey and the average of the several readings was found to be 16° E.

Dependent Resurvey Portion E. Bdy. T. 39 S., R. 15 W.

Reestablishment of the Survey Executed by T. C. Bailey,
in 1877.

Point for the $\frac{1}{2}$ sec. cor. of secs. 25 and 30 on the E. ~~from the north;~~ bdy. of the Tp., at record course and distance; there is no remaining evidence of the original corner.

Set an iron post, 30 ins. long, $2\frac{1}{2}$ ins. diam., 24 ins. in the ground, with brass cap mkd.

	<p style="text-align: center;">GENERAL DESCRIPTION</p> <hr/> <p>The land covered by this survey includes Pine Valley and the lower parts of the surrounding mountains. The township is located in the Dixie National Forest about 20 miles north of St. George, Utah. Access to Pine Valley is by hard surface highway from Central. The land in the mountains is broken and covered with dense growth of oak and mahogany, with scattered juniper and pinon. The valley land is mostly grass pasture and small farms. Water for the valley is furnished by the Santa Clara River, which flows westward through the valley and several small springs on the valley edges. The town of Pineville is located in sections 14 and 15. The mean elevation of the valley is about 6500 feet above sea level.</p>

CERTIFICATE OF SURVEY

509

I, **CRAIG P. SYLVESTER**, HEREBY CERTIFY upon honor that,
in pursuance of special instructions bearing date of the 29th day of April, 19 63,

I have dependently resurveyed a portion of the East boundary and
subdivisional lines in Township 39 South, Range 15 West,

of the Salt Lake Meridian, in the State of Utah, which
are represented in the foregoing field notes as having been executed by me and under my direction;
and that said survey has been made in strict conformity with said special instructions, the Manual
of Instructions for the Survey of the Public Lands of the United States, and in specific manner
described in the foregoing field notes.
